

Lincoln County Power District No. 1

Compact Fluorescent Lighting

March 16, 2007

Compact Fluorescent Lighting Program

- The Lincoln County Power District No. 1 is pleased provide to each of its residential customers one 23 to 26 watt compact fluorescent lamp and one 13 to 16 watt fluorescent lamp. Customers may receive one 23 to 26 watt and one 13 to 16 watt lamp each calendar year from the Power District through the term of the program.
- Customers must pick up the lamps at the Power District Office and are responsible for installation of the compact fluorescent lamps.

Use Of Compact Fluorescent Lamps

- Compact fluorescent lamps fit the same size light socket as a standard incandescent light bulb.
- The initial cost of a compact fluorescent lamp is 10-15 times greater than an incandescent light bulb, but they last approximately 13 times as long and use about ¼ the energy of an incandescent lamp.
- Compact fluorescent lamps work well outdoors. In cold temperatures they do take a few minutes to warm up before they give off full light. Compact fluorescent lamps are good for porch, patio, or other outside lights that are left on all night long and will not need replacing for several years.

Get The Greatest Benefit From Your Fluorescent Lamps

- The 23 to 26 watt compact fluorescent lamp you receive will provide approximately the same light as a 100 watt incandescent (standard) light bulb. To get the greatest energy savings benefit, select the 100 watt light you have on most in your home and replace the bulb with the compact fluorescent lamp.
- Similarly, the 13 to 16 watt compact fluorescent lamp will provide approximately the same light as a 60 watt incandescent (standard) light bulb. Again, select the 60 watt light you have on most in your home and replace the bulb with the compact fluorescent lamp.
